- The information in this publication has been carefully checked and is believed to be accurate; however, no responsibility is assumed for inaccuracies.
- Sanken reserves the right to make changes without further notice to any products herein in the interest of improvements in the performance, reliability, or manufacturability of its products. Before placing an order, Sanken advises its customers to obtain the latest version of the relevant information to verify that the information being relied upon is current.
- Application and operation examples described in this catalog are quoted for the sole purpose of reference for the use of the products herein and Sanken can assume no responsibility for any infringement of industrial property rights, intellectual property rights or any other rights of Sanken or any third party which may result from its use.
- When using the products herein, the applicability and suitability of such products for the intended purpose or object shall be reviewed at the users' responsibility.
- Although Sanken undertakes to enhance the quality and reliability of its products, the occurrence of failure and defect of semiconductor products at a certain rate is inevitable. Users of Sanken products are requested to take, at their own risk, preventative measures including safety design of the equipment or systems against any possible injury, death, fires or damages to the society due to device failure or malfunction.
- Sanken products listed in this catalog are designed and intended for the use as components in general purpose electronic equipment or apparatus (home appliances, office equipment, telecommunication equipment, measuring equipment, etc.). Before placing an order, the user's written consent to the specifications is requested.
When considering the use of Sanken products in the application where higher reliability is required (transportation equipment and its control systems, traffic signal control systems or equipment, fire/crime alarm systems, various safety devices, etc.), please contact your nearest Sanken sales representative to discuss and obtain written confirmation of your specifications.

The use of Sanken products without the written consent of Sanken in the application where extremely high reliability is required (aerospace equipment, nuclear power control systems, life support systems, etc.) is strictly prohibited.

- Anti radioactive ray design is not considered for the products listed herein.
- This publication shall not be reproduced in whole or in part without prior written approval from Sanken.
- Gallium arsenide is used in some of the products listed in this publication. These products are dangerous if they are burned or smashed in the process of disposal. It is also dangerous to drink the liquid or inhale the gas generated by such products when chemically disposed.

 C_2 : Approx. 0.33 μF)
 $*2 D_1$: Diode for protection against the occurrence of a reverse bias condition between the input and the output.
 $*3 R_1, R_2$: External resistor for output voltage setting.
 The equation (1) is applied to output voltage V_O and external resistor R_1 & R_2 .

$$V_O = V_{REF} \cdot \left(1 + \frac{R_1}{R_2}\right) \quad (1) \quad (V_{REF} = 2.55V \text{ (typ.)})$$

 R_2 should be 2.55 k Ω for stable operation.

SI-3050R

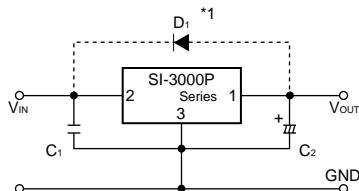

C_0 : Output capacitor (Approx. 200 μF , 50V)
 C_1 : Oscillation prevention capacitor (C_1 : Approx. 47 μF)
 Wirings between 5 (V_{IN}) and 1 (GND) terminals should be the shortest distance as much as possible. When the input line is inductive or if a long wire is used, add a capacitor with good high frequency characteristics and a capacitance of Approx. 0.33 μF in parallel with the C_1 . Tantalum capacitors are recommended for C_1 and C_0 when operating in low temperature environments.
 C_{DLY} : Delay capacitor (reset output)
 R_1 : Pull-up resistor (more than 300 Ω)
 $*1 D_1, D_2$: Diode for protection against the occurrence of a reverse bias condition between the input and the output.
